

SOFTENING SOLUTIONS WITH A **SOLID IMPACT**

Kineticopro's commercial water softener systems are designed to handle the varying water demands of your individual business—from the smallest intermittent process to the largest continuous flow application. Our industrial-strength, non-electric commercial water softeners operate on actual water demand—not a timer or computer. This increases efficiency, lowers maintenance costs and saves you materials, time—and money.

CRUCIAL SUSTAINABILITY

The Kineticopro water softener solution is reliable, self-sufficient—and powered by the kinetic energy of moving water.

METERED REGENERATION

Our solutions eliminate guesswork and regenerate based on actual water usage—which results in minimal salt use and maximum water efficiency.

EFFECTIVE SYSTEM DESIGN

Our twin tank design delivers continuous and uninterrupted supply of soft water, even during regeneration.

COUNTERCURRENT REGENERATION

By operating with 100% soft water, our softeners prolong system life, conserve water and salt, and eliminate hardness breakthrough.

RESISTANCE TO CORROSION

Our solution prolongs the life of valves and tanks—and ensures systems can endure even the harshest water environments.

KineticoPRO's Water Softening Systems

Get back to business faster with reliable softening solutions that efficiently perform demand regeneration processes - with less downtime. Utilizing a progressive twin-tank system, our high-efficiency water softeners promote a continuous flow of soft water through your systems, while protecting your plumbing from lime and scale build-up.

CC SERIES

OPTIMAL FOR: MODERATE
WATER VOLUME

CP SERIES

OPTIMAL FOR: MEDIUM TO HIGH
WATER VOLUME

HYDRUS SERIES

OPTIMAL FOR: LARGE
POINT-OF-ENTRY WATER
